What is aip in azure. Azure information protection (aip) user guide. Azure aip features.

Protect files with Azure Information Protection Azure Information Protection (AIP) helps you keep important documents (Word, PDF, Excel, PowerPoint etc.) and pictures safe from people who shouldn't see them, even if the files are accidentally released to unauthorized persons. AIP leverages on identity-based encryption. This means ITSC username and password are used for encrypting and decrypting data. Users do not need to invent an arbitrary password each time when a file is required to be encrypted. Please refers to Protect files with Azure Information Protection (Documents labels) for upcoming updates. You may also refer to Microsoft's Azure Information Protection user guide for more information. When there are needs to protect documents (Word, Excel, PowerPoint) to be viewed by HKUST members including staff / students or project account owners, you can use any of the following permission options with Office 2013 / 2016 for Windows or Office 2016 for Mac. HKUST - Confidential HKUST - Confidential View Only The table below summarized the properties of the above options: HKUST - Confidential HKUST - Confidential View Only Read Yes Yes Modify Yes No Print No No Copy No No HKUST - Confidential View Only: This content is proprietary information intended for internal users only. This content cannot be modified. HKUST - Confidential: This content is proprietary information intended for internal users only. This content can be modified but cannot be copied and printed. To protect your document: Open your Office application such as Word, Excel, PowerPoint Select the File menu Select Protect Document Select HKUST - Confidential or HKUST - Confidential View Only under Restrict Access Read HKUST Confidential Message To view protected documents, users are advised to use Microsoft Office in any of the following platforms: iOS Android Windows (Outlook 2013 / 2016) Mac OS (Outlook 2016) Protect documents with combination of users You can also protect Office documents using the option Restrict Access: Open your Office document Click File -> Protect Document -> Restrict Access -> Restricted Access Tick the Restrict permission to this document option and enter the email addresses of users in the Read... and Change... boxes separate name with semicolon. Click More Options... if you would like others to print your document, etc. if it is necessary Click OK and then save your protected document Protect documents using Azure Information Protection client Apart from using Microsoft Office to protect your document, user may also Azure Information Protection client with custom protections: Install Azure Information Protection client Check if your devices support AIP: Computers: Windows 7, 8, 8.1, 10 (x86, x64) Mac OS X: 10.8 or above Mobile devices: iPhone and iPad: iOS 8.0 or above Android phones and tablets: 4.4 or above Windows phone: 8.1 Windows tablets: Windows 10 Mobile and Windows 8.1 RT You can protect documents using the AIP client for Windows 7, 8, 8.1 or 10 only. For Windows/Mac OS, Office 2013 / 2016 (Windows) or Office 2016 (Mac) is required for reading protect documents. For Windows platform, logon your computer with Administrative right. Download the correct the Azure Information Protection client (AzInfoProtection.exe), which is available in various perform, including Windows, Mac OS X, iOS, and Android. (Not all supported client devices support all AIP capabilities, please click here to identify which applications support the AIP capabilities, and the exceptions.) Run AzInfoProtection.exe (some Windows users will need to install Microsoft .Net Framework 4 before you can install the AIP Sharing application. You may skip the configuration for Office 2010 if both Office 2013 and Office 2010 are co-exist in your computer). Below is screen capture for Windows: Close the application upon completed the installation How to view files that have been protected? When the Azure Information Protection client application is installed on your computer or mobile devices (iPad, iPhone), you could view a protected file by simply double-clicking it. The document may be an attachment in an email message, or you may see it when you use File Explorer. You can only view protected document if you have the required permission. Protected MS Office document files can be opened by Office 2013, 2016 that are enlightened for AIP. For protected PDF, TXT, JPG, PNG files (with .ppdf/.ptxt/.jpg/.png/.gif file name extension), they must be opened by using Azure Information Protection viewer or Azure Information Protection client. How to protect a file on Windows platform? When you protect a file in-place, it replaces the original unprotected file. You can then leave the protected file where it is, and copy it to another folder or device. You can also attach the protected file to an email message. To protect a file on a device: In File Explorer, select a file to protect. Right-click, and then select Classify and protect. Note: You can also protect multiple files and a folder. When you select a folder, all the files in that folder are automatically selected for protection. You will need to perform file protection for any newly added files as new files will not be automatically protected. Select Protect with custom permissions with one of the following options: Viewer - View Only Users can view the attachments, but cannot print, edit, or copy content. Reviewer - View and Edit User can view and edit the attachments, but cannot print or copy content. Co-Author - View, Edit, Copy and Print Users can view, edit, copy, and print the attachments, but cannot unprotect the content. Co-owner - All permission Users have full control for the attachments; they can view, edit, print, and unprotect the content. Only for me Select the users, groups or organizations or type the users email address(es). For example, a Viewer permission for cctest@ust.hk: Click Apply and you may see a dialog box telling you that the files are protected. Note: Only the Windows version can add protection to PDF files. How to tell a file is protected? If you are the document owner, just invoke the office document and the Office application will tell you the permission status: HKUST - CONFIDENTIAL VIEW ONLY HKUST - CONFIDENTIAL RESTRICTED ACCESS For non-office documents such as PDF, PNG, GIF, JPG, etc., you will note a protected icon of the file in the file explorer or just displays name of the protected documents without any indication (with file extension such as .ppdf, .png, .gif or .jpg). For the following example, files gif01 and pdf01 are protected, but not the others: How to change the protection on a file? Just follows the steps in How to protect a file on Windows to assign new protection. For files with custom permission together with specified users, you may just update the user list and select the right permission. For example, adding cctestpg@ust.hk to the user groups or permission: How to remove protection on files? If you want to remove the protection from a file, right-click the file, click Classify and protect, and then un-check the protect with custom permissions option (Note: You must be an owner of the file to remove the protection). How to send protected documents via email? If the document is already protected using AIP (this is the recommended way to protect documents containing high risk data), you can just attach the protect document using any email tools such as Outlook, OWA, Thunderbird etc. and sent to the recipients. In case you would like to send a protected copy of your document using email tools such as Outlook 2013 or Outlook 2016, you may following the steps in Send Confidential Email using Microsoft Outlook. Please note that only the attachment copy in the email is protected while the original document remains UN-protected. Please note that if your original document is already protected (say with the HKUST -

Confidential protection) and you would like to send to specific users using custom permission, the newly selected options (Viewer, Reviewer, Co-Author, Co-Owner) becomes the new protection for the attachment copy.

The AZ-104 Microsoft Azure Administrator certification exam is designed for people who have experience in implementing, managing, and monitoring a Microsoft Azure environment. The exam will test your technical skills in implementing solutions based on different scenarios. Having prior experience in infrastructure management will help you understand the concepts and services. ... 2022/06/29 · We invite you this month to RSVP and join the Azure Government user community as we explore the "Art of the possible: AI in government" Wednesday, March 30 from 6 – 7 p.m. ET during a virtual meetup where we'll discuss strategies, best practices and the latest tech driving exciting AI for good projects in government. 2022/08/01 · After you have installed the Azure Information Protection unified labeling client, make sure that you give users instructions for how to label their documents and emails, and guidance for which labels to choose for specific scenarios. For example, Online user instructions: Azure Information Protection unified labeling user guide 2020/01/21 · 3) Conduct User Account Provisioning. Adding users to Azure Active Directory requires either User administrator or Global administrator rights. The process is accomplished via the steps below: Sign into the Azure Portal as a User administrator for the organization. Search for and select Azure Active Directory from any page. 2022/08/01 · To get started with AIP, download and install the unified labeling client and scanner. Sign up for a free trial (Enterprise Mobility + Security E5) Download the client; Quickstart: Deploy the unified labeling client; Get familiar with AIP using our initial tutorials: Tutorial: Installing the Azure Information Protection (AIP) unified labeling ...
